NEW YORK, May 12.—Peggy Hopkins Joyce, returning today from Paris on the Mauretania, bubbled over with indignation when, on the trip up the harbor from quarantine, she was shown a Washington dispatch stating that motion picture theater owners of America had banned any films in which she might be featured, "in the interests of a clean screen." "I haven't committed any crime," asserted the actress, whose name has been mentioned in dispatches from Paris in connection with the recent suicide of "Billy" Erzurum, an attaché of the Chilean embassy. The Erzurum family indignantly denied any reports that the actress died because of unrequited love of the actress. Miss Joyce's baggage was ordered detained and sent to the appraiser's store. Customs agents later subjected her to an examination, but declined to comment.

Customs officials seized a diamond and emerald plaque valued at \$14,000 belonging to Peggy Hopkins Joyce, which they asserted the actress had not declared when she returned from Paris.

30-FOOT SUMP PROVIDED FOR GREAT DIVIDE

Crosscutting Has Been Started South from Fourteen Hundred Level of Shaft.

The sump of the Tonopah Divide shaft has attained a depth of 30 feet below the 1400-foot level, and a station is now being cut at that level to permit of driving a crosscut to the south to pick up the vein. This work will be undertaken just as soon as the station has been cut, and it is anticipated that when the objective is reached splendid results will be forthcoming.

The water seepage from the slips in the vein has been found to be continuous for the last 40 feet of sinking. However, it is hardly believed that the water level has been reached, but the sump has been made large enough to handle the situation in the event that a spring should be encountered in extending the south crosscut to the vein.

During the week ending Wednesday, May 10, a total of 163.8 feet of underground work was performed, as can be seen from the official report furnished by William E. Waters, the superintendent:

"204 east drift advanced 21 feet; 230 west drift advanced 26 feet; 215 intermediate south crosscut advanced 31.3 feet; 1011 south crosscut advanced 24 feet; 213 raise advanced 13 feet; 317 A raise advanced 10 feet; 417 raise advanced 9 feet; 1400 station, south, advanced 12 feet; 1400 station, north, advanced 4 feet; shaft, mining, 7.5 feet."

The usual production of ore, consisting of about 50 tons daily, was made and the product was consigned to the Belmont mill, with the values averaging between \$25 and \$30 a ton.
